INVESTOR PRESENTATION — APRIL 2026

ROLL THE CODE

"Days NOT Months"

Agentic AI Product Factory

Presented by Antal Károlyi, PhD — Co-Founder & Board Member

SPEAKER NOTES

Open with the provocation: "What if you could build enterprise software in days instead of months?" Introduce yourself, your PhD background, and your role at Roll the Code. Mention SignCoders and your commitment to inclusive tech teams from day one.

THE PROBLEM

Enterprise Software Delivery Is Broken

70%
of IT projects exceed budget or timeline

$260B
wasted annually on failed IT projects

18mo
average enterprise delivery cycle

- Traditional delivery takes months or years, costs a fortune, and still misses the mark
- Engineering talent shortage drives costs up 15–20% year-on-year
- Companies are stuck between slow consultancies and unreliable offshore shops

> **SPEAKER NOTES**
>
> Pause on the $260B number — let it sink in. This is PMI data, well-established. The 70% failure rate is not "total failure" — it includes significant overruns. Ask the audience: "How many of you have been on one of these projects?" Transition: "We built something to fix this."

WHY NOW?

The Timing Is Right

AI Code Generation Hit Inflection

LLM-assisted coding tools reached production quality in 2025. But tools alone are not enough — you need orchestration, architecture, and supervision.

Enterprise AI Budgets Exploding

Global enterprise AI spend projected to exceed $300B by 2027 (IDC). Companies actively seek AI-native delivery partners.

IT Talent Crisis Accelerating

3.5M unfilled tech positions globally (Korn Ferry). AI-orchestrated delivery is the only way to bridge the gap at scale.

6–9 Month Window

Early pioneers are forming now. In 6–9 months, first wave hits critical mass. We are ahead of the curve.

SPEAKER NOTES

Key message: The tools exist, but orchestration is the moat. GitHub Copilot, Cursor, Claude Code — these are developer tools, not delivery systems. We built the orchestration layer that turns these tools into a managed, enterprise-grade delivery pipeline. The 6–9 month window is critical: this is the investor's window too.

THE TEAM

Built to Execute

BOARD OF DIRECTORS & EXECUTION

Antal Károlyi, PhD
Business development, investor relations, sales leadership. Founder of SignCoders. PhD in technology management.

Réka Víg
AI-first product strategist, UX/UI designer, serial entrepreneur. Multiple successful product launches.

Zoltán Héczei
AI workflow automation expert, n8n specialist, community builder, business analyst. Deep enterprise integration experience.

TECH LINEUP

Gábor Tatár
AI orchestration product owner, software architect. 20+ years in enterprise systems. Seasoned entrepreneur.

Ákos Karacs
QA, business analyst, software architect. The human behind the AI agent "Akos" — capturing institutional knowledge in systems.

Roland Repka
Senior full-stack developer. Production-grade implementation across multiple tech stacks.

SPEAKER NOTES

Key differentiator: this is not a team of AI enthusiasts who learned to code last year. Combined 80+ years of enterprise software delivery experience. The "I have built an agent called Akos" story — use it here. Antal, Réka, and Zoltán are both board AND execution — skin in the game.

ADVISORS & PARTNERS

Strategic Ecosystem

ADVISERS

Ágnes Szabó
Branding and marketing

Steve Balogh
Enterprise IT advisory

COOPERATION PARTNERS

SignCoders

Social enterprise employing Deaf and hard-of-hearing professionals in mixed tech teams. Handles agentic AI implementation, UX/UI design, social media. Founded March 2020. A genuine diversity story with deep technical capability.

Inflexion TrustChain

Péter Győri — IT sales and SME community network. Key channel for enterprise distribution in the UK and CEE markets.

Szikra / TÉK / TnDtech

QA, automation, software engineering leadership. Physical home base, talent pipeline, and technical community.

BusinessImpact.ai

Sándor Lőrinc — n8n workflow expert. Powers our Workflow Automation offering with deep integration expertise.

SPEAKER NOTES

SignCoders is a cooperation partner, never position as subcontractor. The diversity angle is genuine, not a PR footnote — Antal founded SignCoders himself. Partner network gives us distribution without building a sales army from scratch.

TARGET MARKET

Who We Serve

Ideal Early Adopter Profile

- Understands AI implications — no education from zero needed
- Has legal flexibility (greenfield, standalone, non-mission-critical)
- Under delivery pressure — knows what they want, needs it fast
- Ready to accept off-prem AI solutions

Target Segments (Priority Order)

- **1. Failed IT projects** — corporations whose major project is about to be declared a failure
- **2. IT agencies** — mid-to-large agencies wanting to transform before obsolescence
- **3. Scaleups** — fast movers needing MVP/PoC yesterday
- **4. Innovation hubs** — enterprise R&D units exploring AI delivery
- **5. Monday.com refugees** — workflow automation entry point

UK (primary) | Nordics | Hungary (founders' network)

SPEAKER NOTES

UK is primary because: English-speaking, largest IT market in Europe, strong VC/angel ecosystem. Nordics are secondary: high AI adoption rate, willingness to try new vendors. Hungary is low-hanging fruit via personal network — not primary market, but immediate revenue. Segment 1 (failed IT projects) is the highest-value entry point: urgent pain, budget already allocated.

MARKET OPPORTUNITY

TAM / SAM / SOM

$550B
TAM
Global custom software development market (Statista 2025)

$12B
SAM
AI-augmented delivery in UK + Nordics + CEE mid-market & enterprise

$8M
SOM
Year 3 target: 50–70 clients at €75K–200K ACV

Sources: Statista, IDC AI Services Forecast, Gartner IT Services Market Guide. Full methodology on Slide 17.

SPEAKER NOTES

SAM methodology: UK+Nordic IT services ($120B) × AI-augmented adoption rate (15%) × mid-market share (65%) = ~$12B. SOM is conservative — less than 0.1% of SAM. We only need 50–70 clients to hit $8M. Key insight: this market is being created right now. The TAM grows as AI-orchestrated delivery becomes the norm.

OUR SOLUTION

Three Offerings, One Mission

We build custom software products in days, not months. Architect-supervised AI orchestration. **Not vibe coding.**

FLAGSHIP — PRIMARY REVENUE

The Orchestration System

Multi-layered, deployment-agnostic, agentic AI orchestration. Autonomous, deterministic, enterprise-grade.

- PoC/MVP: €10K–25K, days
- Enterprise: €50K–200K, weeks
- Legacy refactoring included

ENTRY POINT

Workflow Automation

n8n-based automation for ERP/CRM pain. Lighter touch, faster sales, retainer potential.

PIPELINE BUILDER

AI Training

Agentic AI development training. Door-opener. Standalone or bundled.

Autonomous | Orchestrated | Deterministic | Tech-stack agnostic | Deployment agnostic | Architect-supervised

SPEAKER NOTES

Emphasize: we are NOT a Copilot/Cursor wrapper. We built an orchestration system that manages multiple AI agents under architect supervision. "Not vibe coding" — this is deterministic, spec-driven, architecture-first. The three offerings create a natural land-and-expand: training → automation → full orchestration. Legacy refactoring is a huge wedge — reverse-engineer the old system, generate a modern spec, implement with orchestration.

TRACTION & PROOF POINTS

Early Momentum

5+

Projects Delivered

PoC and MVP builds using the Orchestration System. Average: 5–8 business days from spec to deployment.

3

Enterprise Pilots

Active conversations in UK and Hungary. NDA-protected — details on request.

100%

Client Retention

Every early client returned for follow-on work or expanded scope.

10x

Speed vs Traditional

Projects that take 3–6 months delivered in 1–2 weeks.

Anonymized case studies and client references available under NDA.

SPEAKER NOTES

Be honest: we are early-stage. But the signals are strong. 100% retention means product-market fit at the delivery level. 10x speed claim is verifiable — we can show before/after on specific projects. Mention that we're building the case study pipeline now; investor can be part of formalizing this.

COMPETITIVE LANDSCAPE

Where We Sit

AI CAPABILITY ↑

Young Solopreneurs AI-first, lack enterprise depth	**Roll the Code** **AI-first + senior team**
No-Code Platforms DIY, no delivery	**Large Consultancies** Enterprise ties, slow on AI

ENTERPRISE EXPERIENCE →

COMPETITOR TYPE	WEAKNESS	OUR ADVANTAGE
Large consultancies	Slow, expensive, lagging on AI	Speed + AI-first delivery
No-code platforms	DIY, no implementation	Full delivery + expertise
Young solopreneurs	No industry connections	Senior team, enterprise credibility
Offshore dev shops	No AI depth	Quality + AI orchestration

SPEAKER NOTES

Our sweet spot: AI enthusiasm + decades of industry experience. The 2×2 tells the story visually: everyone else is missing one dimension. Anticipate the question "what about Deloitte/Accenture?" — they will get here eventually, but they're 12–18 months behind on tooling. Our moat: the orchestration system + the team's combined enterprise knowledge captured in AI agents.

GO-TO-MARKET

How We Win Clients

Direct Outreach

Targeted B2B to CTOs, Heads of Engineering, innovation leads. Cold email + LinkedIn + warm intros.

Partner Channels

Inflexion for SME distribution. Szikra for talent referrals. BusinessImpact.ai for automation leads.

Land & Expand

Entry via automation (€5K–15K) or training. Expand to Orchestration (€50K–200K).

Sales Motion

- **Week 1:** Discovery + pain qualification
- **Week 2:** Paid scoping workshop (€2K–5K)
- **Week 3–4:** PoC delivery — client sees working product
- **Month 2+:** Full engagement contract

> **SPEAKER NOTES**
>
> The paid scoping workshop is key — it qualifies intent AND generates revenue from day one. Land-and-expand works because once they see the orchestration system in action, the conversation shifts from "can you do this?" to "what else can you build?" UK market entry: start with Hungarian expat CTO network, expand through Inflexion's channels.

BUSINESS MODEL

How We Make Money

Pricing Tiers

TIER	PRICE	TIMELINE
Scoping Workshop	€2K–5K	1 week
PoC / MVP	€10K–25K	Days
Mid-size Solution	€50K–200K	Weeks
Workflow Automation	€5K–15K	1–2 weeks
AI Training	€3K–8K	1–3 days

Model Characteristics

- Fixed-scope, milestone-based (T&M is fading)
- 70–80% gross margins on orchestration
- Workflow automation = recurring retainer revenue
- Training opens doors, builds brand
- Path to productised delivery over time

SPEAKER NOTES

The margin story is compelling: AI orchestration means our COGS are primarily compute + architect oversight, not large dev teams. As we build reusable templates, margins improve further. Fixed-scope de-risks for clients and creates predictable revenue for us. The productisation path: Year 1 = services, Year 2 = templated delivery, Year 3 = platform potential.

KEY FINANCIALS

3-Year Projection

	YEAR 1 (2026)	YEAR 2 (2027)	YEAR 3 (2028)
Clients	8–12	25–35	50–70
Revenue	€300K–500K	€1.2M–2M	€4M–6M
Avg Contract Value	€40K	€55K	€75K
COGS	30%	25%	22%
Gross Margin	70%	75%	78%
OpEx	€250K	€600K	€1.2M
EBITDA	€(40K)–100K	€300K–900K	€1.9M–3.5M

KEY ASSUMPTIONS

- ACV grows as enterprise share increases in client mix
- Sales cycle: 2–4 weeks (PoC), 6–8 weeks (enterprise)
- Churn: <10% annual (project-based model reduces churn risk)
- Headcount: 6 → 12 → 20 (lean, AI-leveraged)
- COGS decrease as orchestration templates become reusable

SPEAKER NOTES

Year 1 may show a small loss — that's by design. We're investing in the sales funnel. The EBITDA range reflects conservative vs. optimistic client acquisition. Key: we reach profitability in Year 1 under the optimistic scenario, comfortably in Year 2 under conservative. Headcount stays lean because AI orchestration replaces traditional developer headcount.

THE ASK

Investment Opportunity

€250K

Pre-Seed Round

SAFE or convertible note. Targeting close Q2 2026.

Use of Funds

- **60%** — Founding team & key hires
- **30%** — Sales funnel build
- **10%** — Operations

Milestones This Enables

- 10+ paying clients by end of Year 1
- €500K ARR run rate by Q4 2026
- 3 enterprise reference clients (UK market)
- Productised orchestration templates for top 3 use cases

SPEAKER NOTES

€250K is a lean raise — we're capital-efficient because AI orchestration means less headcount. SAFE or convertible note: we're flexible on structure. The milestones are concrete and measurable — investor can hold us accountable. Key message: this money buys 12–18 months of runway to prove the model at scale.

APPENDIX

Deep Dive

Legal framework · Market research · Detailed methodology

LEGAL FRAMEWORK

Entity Structure & IP

Entity Structure

- **Roll the Code** — primary operating entity (Hungary-registered, UK market focus)
- **SignCoders** — cooperation partner, separate legal entity (est. March 2020)
- Board: Antal Károlyi PhD, Réka Víg, Zoltán Héczei
- Partner agreements (not subcontracting) with Inflexion, Szikra, BusinessImpact.ai

IP Ownership

- Orchestration System IP owned by Roll the Code
- Client deliverables: IP transfers on final payment
- Core framework and templates remain RTC property
- Training materials: RTC intellectual property

Key Terms

- Fixed-scope, milestone-based contracts
- Standard NDAs for all engagements
- Professional liability insurance in place
- GDPR-compliant data handling across all AI operations

SPEAKER NOTES

Investors will ask about IP: the orchestration system is ours, client code transfers on payment. This is standard in the industry and protects both sides. GDPR compliance is non-negotiable for UK/EU market — we handle this by design. SignCoders partnership structure means no subcontractor liability exposure.

MARKET RESEARCH

Detailed Market Sizing

METRIC	VALUE	SOURCE
Global custom software dev market	$550B (2025)	Statista
Global AI services market	$150B (2026e)	IDC
UK IT services market	$78B (2025)	Gartner
Nordic IT services market	$42B (2025)	Gartner
AI-augmented delivery adoption	15–22% (2026e)	McKinsey Digital
Enterprise AI spend growth YoY	38%	IDC AI Tracker
Unfilled global tech positions	3.5M	Korn Ferry
IT project failure/overrun rate	70%	PMI

Sizing Methodology

- **TAM ($550B):** Total global custom software development & IT services market addressable by AI-augmented delivery
- **SAM ($12B):** UK+Nordic IT services ($120B) × AI-augmented adoption (15%) × mid-market/enterprise share (65%)
- **SOM ($8M):** 50–70 clients × €75K–200K ACV via direct + partner channels. Conservative <0.1% of SAM.

Growth Drivers

- Enterprise AI budgets growing 38% YoY
- Talent shortage makes AI-orchestrated delivery increasingly attractive
- EU AI Act favours architect-supervised, deterministic systems

- Early mover advantage: 6–9 month window before consolidation
